

# If you have diabetes...

Normal Vision

Diabetic Eye Disease

## ...a simple eye exam can save your sight!

- If you have diabetes, you are at greater risk for blindness even though your vision may seem fine.
- Only a dilated eye exam—by an eye doctor—can find the changes in your eyes that could lead to blindness.
- Early treatment of diabetic eye disease can prevent blindness.
- To arrange a simple eye exam, contact your eye doctor or ask your regular doctor for a referral.
